

Advantages?

Less need of management.

One repository. One configuration. One process.

Advantages?

One repository. One configuration. One process.

What would be necessary to update a single package?

```
{
  "name": "@org/ui-kit",
  "dependencies": {
    "@org/configuration": "^1.0.6"
    ...
  }
  ...
}
```

```
{
  "name": "@org/configuration",
  "dependencies": {
    "prettier": "^7.0.2",
    "eslint": "^25.0.4",
    ...
  }
  ...
}
```

```
{
  "name": "@org/store",
  "dependencies": {
    "@org/configuration": "^1.7.3",
    "redux": "^7.0.2",
    "react-redux": "^7.0.2"
  }
  ...
}
```

```
{
  "name": "@org/utils",
  "dependencies": {
    "@org/configuration": "^1.7.3"
  }
  ...
}
```

```
{
  "name": "@org/new-project",
  "dependencies": {
    "@org/configuration": "^1.7.3",
    "@org/ui-kit": "^3.0.3",
    "@org/store": "^2.1.3",
    "@org/utils": "^3.4.8",
    ...
  }
  ...
}
```
